2.0 Purpose

SLS (Shipment Label System) is an expansion package for existing WFS system deployed on Schott Penang server focus on providing printing label capabilities for the certain process at the Finish Good area. The objective is to provide continuity process flow without need to use another application to perform the label printing and to simplify the SOP for quick and simple steps:

1) Ensure the process transfer from the production to the FG work flow based of Rev5.
2) Ensure the label can be print on the request label printer (SATO/ ZEBRA) and recorded for tracking.
3) Ensure the label can be track by the search and filter tools.
4) Ensure the label graphics can fine tune and save with tool based on the system.
5) Ensure the label can be print in the key label package based of requirement of Rev5.
