YOUR FUTURE BUILT TODAY

WEB_BASED FYP PROGRESS TRACKING SYSTEM

BOON YUN NEE (BCSCUNP)
Supervisor: Ms. Jivita Raja

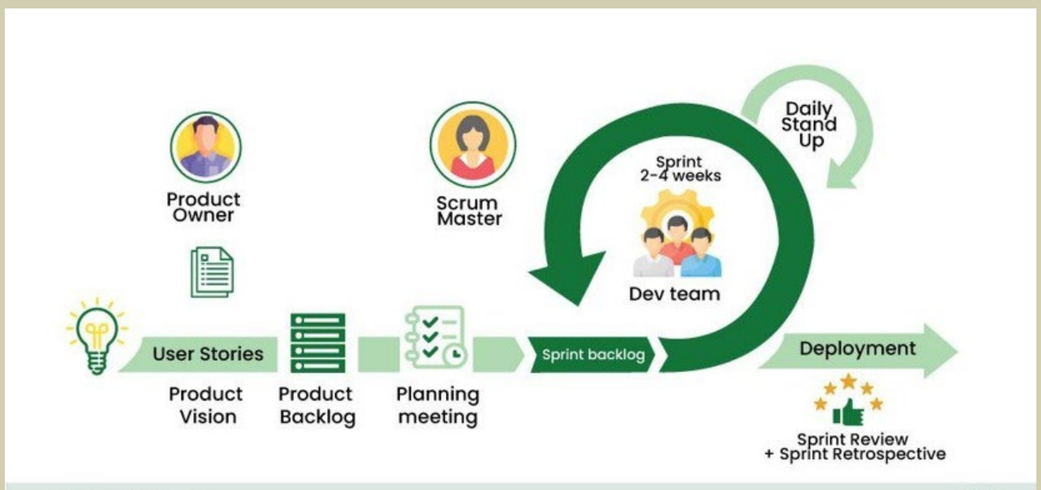

01

PROBLEM STATEMENT

- Fragmented Channels: Teams rely on a messy mix of WhatsApp, loose emails, and spreadsheets.
- Allocation Bottlenecks: Manual supervisor matching causes severe administrative lag and scheduling stagnation.
- Zero Visibility: Coordinators lack clear tracking, making it difficult to spot "at-risk" students before they miss critical deadlines.
- The Data: 71% of students rely on external chat apps for academic tracking; 81% face stressful response delays.

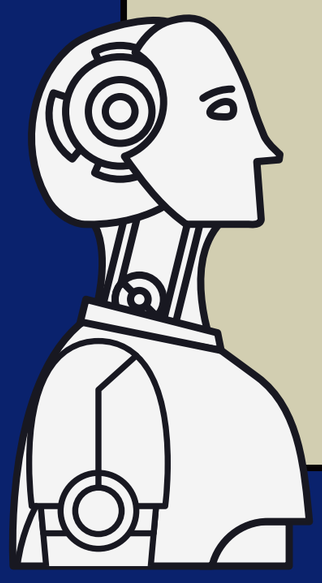

02

RESEARCH METHODOLOGY

Scrum Process

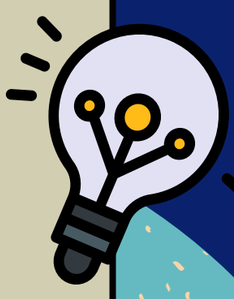

- Stage 1: Product Backlog Formulation
- Stage 2: Sprint Planning & Technical Design
- Stage 3: Daily Sprint & Code Implementation Daily Routine
- Stage 4: Sprint Review & Design Validation Product Increment
- Stage 5: Sprint Retrospective Process Audit
- Stage 6: Lifecycle Iteration (10-Week Timeline)

03

OBJECTIVES

1. To design and develop a centralized web-based FYP progress tracking system using ASP.NET Core MVC, Microsoft SQL Server, and Bootstrap that digitizes student progress submissions and tracking of weekly logbooks .
2. To implement role-based dashboards (for students, supervisors, and administrators) that display real-time student progress, submission status, and pending approvals with integrated automated 2-day selection rejection handling.

04

SCOPE

- Student Module: Secure login, supervisor bidding, visual progress bars, thesis uploads, weekly logbooks, meeting scheduling, and direct chat.
- Supervisor Module: Student request management with a 48-hour timeout, grading with feedback, at-risk student tracking, and logbook sign-offs.
- Admin Module: Global cohort statistics, Excel user registration, manual allocation overrides, deadline control, and data report generation.
